Improved Design! Stabilizer Link Kit General Motors Corp.

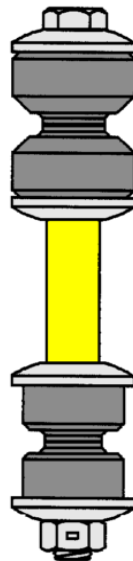

**REAR
 Suspension**

**(2) Per
 Vehicle**

The Problem:

OE uses 2 different durometer bushings. A very soft rubber for the top connection and a very hard Thermoplastic for the bottom connection. The problem occurs during installation, the top bushings become totally distorted before the bottom bushings even have a chance to properly compress against the eyelet of the sway bar.

The end result is a poor fitting product.

The Problem Eliminator!

RAMCOA's Improved Design Link provides a perfect fit. We supply Thermoplastic rubber bushings for both the top and bottom and also provide the proper fitting bushings for the sway bar eyelet.
